### EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Douglas W. Sprinkle on January 19, 2006.

The application has been amended as follows:

Claim 1, line 7, before "said cover", the phrase - -said cover being free of adhesive on an outwardly facing side of said cover,- - has been inserted.

Claim 7, line 6, the phrase "cover assembly" has been replaced by the phrase - -separate cover assembly free of adhesive on an outwardly facing side- -.

Claim 7, line 11, the article "an" has been deleted and replaced by the phrase - -a longitudinally extending- -.

Claim 7, line 11, the word "across" has been changed to - -overlying- -.

Claim 7, line 12, after "assembly", the phrase - -, and which detachably secures said cover edges together- -has been added.

Claim 9, line 3, after "substrate", the phrase - -having an outwardly facing side that is free of adhesive- - has been inserted.

2. The following is an examiner's statement of reasons for allowance:

Art Unit: 1772

A review of applicants' arguments in the amendment filed on November 8, 2005 and a review of the instant amended claims has convinced the examiner that the claims are allowable over the applied prior art of record. The prior art fails to teach or suggest an adhesive roller assembly having a plurality of overlapping layers, each layer having a backing sheet with an adhesive coating on an outwardly facing side, a separate cover is removably and replaceably disposed around and having one side in contact with an outermost layer of said adhesive roll, the cover being free of adhesive on an outwardly facing side of said cover, and an adhesive release coating on its one side facing contacting the adhesive, the cover having two longitudinally extending edges positioned adjacent to each other, a longitudinally extending adhesive retainer strip is overlying said edges and detachably secures the edges together, and a pull-tab is adhesively attached along one side of said retainer strip. Also, the prior art fails to teach a method of manufacturing the above discussed adhesive roller comprising the steps of spiralwinding the overlapping adhesive strips around a cylindrical core, spiral winding the separate cover around the outermost adhesive strip layer, forming a longitudinal slit through said cover thereby forming abutting edges, and applying a longitudinally extending adhesive retainer strip along and overlying said abutting edges. Also, no evidentiary support could be provided to support the position that the claimed invention would have been obvious to one having ordinary skill in the art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
